Kinvaro T-Slim wins Red Dot Design Award 2020

Yet another award for GRASS: the drawer system Vionaro was only recently honoured with a Red Dot Award; this year, GRASS has won this prestigious award in the “Product Design” category for its new, completely innovative movement mechanism Kinvaro T-Slim, made in Germany.

The Red Dot Award focuses on values that are particularly important in product development terms and contribute to making a product stand out from the competition: innovation and high design quality.

The international jury awards its seal of quality approval only to products of outstanding design quality; accordingly, the competition for this award is fierce. Last year alone, around 6,500 products were submitted for consideration.

From this huge number of submissions, Kinvaro T-Slim was one of the products chosen as outstanding. GRASS has now won one of these coveted design awards for the fifth time.

Kinvaro T-Slim is the thinnest, most efficient flap lift system ever developed. It combines purist looks with outstanding durability and the art of perfect movement in a unique way.

The flap lift mechanism blends into the furniture almost invisibly, thereby unlocking completely new possibilities for overhead wall cabinets. It offers furniture designers and manufacturers maximum flexibility.

Besides the aesthetic bonus, the reduction in size offers another advantage: the flap lift mechanism takes up very little room, which means that the available storage space can be used to its full potential.

Kinvaro T-Slim – quality made by GRASS in Germany.
